

Hey, I just started this assignment on Sunday, and definitely ran into some challenges that I'd like to go over with a tutor and then come back and improve the assignment.

- 1) I couldn't get the line graph to work that well. I'd like to
- 2) I couldn't get the crowdfunding analysis to populate correctly using the Countifs formula-
- 3) It was a challenge getting the statistical analysis sheet to populate correctly.

I wanted to hand it in on time even though it's incomplete. I'll be able to meet with a tutor sometime this week and update this.

Thank you,

Please find the rest below:

- Create a report in Microsoft Word, and answer the following questions:
 - Given the provided data, what are three conclusions that we can draw about crowdfunding campaigns?
 - Crowdfunding campaigns are over 50% successful.
 - The theater was the parent category with the most fundraisers, followed by film and video, and Music.
 - Many fundraising campaigns raise more than double the amount of their goal.
 - What are some limitations of this dataset?

- With this dataset it's challenging to determine why some campaigns were successful and why some were not.
- What are some other possible tables and/or graphs that we could create, and what additional value would they provide?
 - Yes, we can use different types of graphs to see different patterns within the data. For example a scatter plot might more clearly show a large trend based perhaps with the time variable.
 - We could also run a currency conversion to see if we can compare apples to apples on the fundraising side.
